JAOP12SL

OVEN/PROOFER COMBINATION

The JAOP series from Doyon is known worldwide for its unique JET AIR SYSTEM. The air moves in one direction, stops then moves the other way resulting in a bidirectional and gentle velocity air flow for exceptional baking results. This system will help you bake faster and more evenly without having to turn pans during baking time. The Jet Air fan system will save energy and labor costs.

The JAOP provides great flexibility in terms of range of products that can be baked or cooked. It features a programmable or manual one shot and constant pulse steam injection. To get the results you really want, we have added as standard a fan delay for those delicate products.

It's the easiest way to proof with an even air flow system, fully automatic humidity system for heat and moisture (no water pans to fill). It comes with heat and humidity controls.
